

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph appearing at page 1, line 22 through page 2, line 2 with the following amended paragraph:

Conventionally, a known method for preparing the aforementioned Co ferrite is to form it as a thin film by using a spin-spray-ferrite plating method. In order to further improve the magnetic properties of the magnetic material, a known research has been carried out in regards to forming Co-Ni ferrite thin films by the above-described method (see ~~Cho, et. al. "Effect of Adding Ni to Co Ferrite Thin Film"~~, Zhang et al., "Ni Addition into Co Ferrite-plated Films", Powder and Powder Metallurgy, vol. 47, No. 2, P171-174, 25th of FEBRUARY, 2000).
